

# Pull Test Kit 30 ton capacity

## DIAGRAM

## GENERAL INFORMATION

- The pull test kit consists of two assemblies:
  - a mechanical assembly which includes a claw, stand, nut, & spindle
  - a hydraulic assembly which includes a hollow core ram, hand pump, gauge, & hose
- The gauge measures pressure, which is easily converted into tons of load
- Suitable for tensioning Dywidag™ threadbar and testing virtually all types of rockbolts and soil nails
- When testing Split Set™, Swellex™, or forged head bolts, the pull collar must be put onto the bolt BEFORE installation of the bolt
- 30 ton units available for sale or rent
- Comes complete with wooden crate
- Pull test collars available upon request
